

What we need from you

The website is **built and working** — every page is finished. The items below are the ones only Pharmatiya can supply. Where we have drafted copy ourselves, we need you to **confirm it is accurate**, not write it. Nothing is published without your sign-off, and nothing has been invented to fill a gap: where material is missing, that section carries a visible marker or is left out.

● Needed now — holds up more than one page ● Needed before launch ● Optional — section omitted if not supplied

DECISIONS — ONE-LINE ANSWERS, NO FILES

☐ The product's public name	Your brief says NextGen AI ; your site's menu says RWE - Builder . One name, please — it sets the menu, the page address and every button.	●
☐ Dataset name clearance	Yes or no to naming each publicly: Aetna/CVS, Cigna, Select Health, MedStar, Express Scripts, Komodo, Intermountain. Without clearance we show data <i>types</i> only.	●
☐ Where enquiries should go	Destination inbox for new clients, existing clients, and press. One address for all three is a fine answer.	●
☐ Compliance review turnaround	How many days an internal review of a factual claim takes. We need the timing, not the review itself.	●
☐ The Outcomes Research division which organisation	Your strongest single credential. Unnamed, the homepage currently reads “pending clearance” in the middle of it.	●
☐ Hosting, and where forms send	The site can go anywhere. It needs a form handler — we will recommend one. Until this lands the contact form and Digest signup are deliberately disabled.	●
☐ Public email address	Confirm admin@pharmatiya.net is right, or give us another.	●
☐ Role title & founding year	Neither document states a role at Pharmatiya, or the year it was founded. Both currently show a “to confirm” marker.	●
☐ Patent number	Your résumé gives two: 8,744,872 (twice) and 10489717 (once). We used the first. If both are real, say so and the figures gain “2 US patents”.	●
☐ Calendar booking link	If you want visitors to book themselves. Without it the panel becomes a “request a time” field instead.	●

COPY FOR YOU TO CHECK — WE WROTE IT, YOU CONFIRM IT

☐ The three service descriptions	Problem, approach, methods, deliverables, and the four-stage “how it runs” sequence for each. The stages are newly drafted and most likely to need correcting.	●
☐ Full deliverables per service	What a client actually receives at the end. Currently three or four items each, flagged “to be confirmed”.	●
☐ Therapeutic areas	Twelve are listed, each backed by a citation from your bibliography. Tell us which to add where your experience is broader.	●
☐ Quarterly Insights Digest	Frequency, subject matter, who writes it. This will be its first working signup.	●
☐ Engagement model	How projects start, run and conclude — and pricing if you will publish it. Omitted entirely rather than shipped with placeholder figures.	●

NEXTGEN AI — THE LEAST COMPLETE PAGE, AND YOUR BIGGEST DIFFERENTIATOR

☐ How patient data is handled	Your precise, internally reviewed wording. The page states no PHI is uploaded; this is the claim most likely to be challenged in procurement.	●
☐ What the product is one sentence	The page opens with a headline we wrote and a “definition to be confirmed” marker beneath it.	●
☐ The model, and its version	Your brief asks for disclosure rather than a disclaimer, so there is a slot for naming it — and for what happens when it changes.	●
☐ What the model does / what a researcher does	Both columns are drafted. Confirm, correct, and add anything missing.	●

☐ What the tool does <i>not</i> do	Three or four points. Stating limits plainly is a trust asset with this audience, not a weakness.	●
☐ Product screenshots	PNG, 1600px wide or more, real data blurred. We will not mock up a fake interface.	●
☐ The study list	CSV export of the <code>studylist</code> sheet, or read access. We rebuilt the search — it works now, but indexes nothing without the data.	●

ASSETS

☐ Team photographs	Headshots, 1000px+ short edge. Phone photos in good light are fine. No stock portraits will be substituted — without these the section ships as names and credentials in type only.	●
☐ Logo as a vector file	SVG, AI or EPS. The current logo is a low-resolution JPEG and looks soft on modern screens. Confirms your exact brand colours too.	●
☐ Typeface approval	We will propose two or three. Roughly \$200–500 one-time, paid by Pharmatiya.	●
☐ The rest of the team	Name, credentials, role and two or three sentences each. Any number.	●
☐ Office or working photography	One or two images, landscape, 2000px+. Not posed.	●

EVIDENCE – THE TWO THAT MATTER MOST

☐ Two or three case studies anonymised	The challenge, dataset, method, approach and outcome. No client names needed. If writing them is the blocker, we will run a 90-minute interview and draft them for your approval.	●
☐ One sample deliverable	A redacted synopsis or report, so a prospective client can judge the output before commissioning any.	●

If you only do five things: dataset clearance (15 minutes, unblocks three pages) · hosting and form destination (the site can then receive an enquiry at all) · product name and NextGen AI detail · team photographs and the vector logo · case studies.

Separately, and worth acting on either way: the Google Sheets API key for your study list is readable in your current homepage's page source. Anyone can view it and query the sheet. We would rotate and restrict it.
