

What we still need from you

The site is built. These are the items only Pharmatiya can supply — each one mapped to exactly where it appears and what happens if it does not arrive.

HOW TO READ THIS

Nothing below is blocking the build — every page is finished and working. What these items change is whether a section ships **complete**, ships with a visible placeholder, or is **left out entirely**. Where we have drafted copy ourselves, we need you to confirm it is accurate, not to write it. Nothing gets published without your sign-off.

01 Decisions

No files or writing needed — each of these is a one-line answer, and several unblock more than one page.

- ☐

The product's public name

BLOCKING

One word answer.
Until then: we are guessing.

Your brief calls it **NextGen AI**; your current site's menu calls it **RWE - Builder**. We need one name for public use.

Appears in main menu · page address /nextgen-ai/ · every button on that page · homepage panel · the redirect list from the old site
- ☐

Dataset name clearance

BLOCKING

Yes / no per name.
Without it: we show data types only. Every name stays hidden.

Your current About page names these organisations. We need a yes or no on each for *public* use: Aetna / CVS, Cigna, Select Health, MedStar, Express Scripts, Komodo, Intermountain Healthcare.

Appears in Evidence → dataset coverage · About → data we work in · Home → coverage band

- ☐ **Where enquiries should go** **BLOCKING** Up to 3 email addresses.

Three routes are built — new client, existing client, press & partners. We need the destination inbox for each. One address for all three is a valid answer.

Appears in Contact → enquiry routing
-
- ☐ **Compliance review turnaround** **BLOCKING** A number of days.

How long does an internal review of a factual claim take? We need the *timing*, not the review itself, so the NextGen AI trust statements can be scheduled rather than rushed.

Appears in NextGen AI → trust section
-
- ☐ **Hosting, and where the forms should send** **BEFORE LAUNCH** Provider name.

The site is not tied to Squarespace and can go anywhere. It also needs somewhere to send form submissions — a form service, or your host's built-in handler. We are happy to recommend one.

Without it: no enquiry can be received.

Appears in Contact form · Quarterly Insights Digest signup

CURRENTLY

Both the contact form and the Digest signup are **deliberately disabled**, with a visible note saying so. A form that looks like it sends but does not is the exact failure on your current site, and we will not repeat it.
-
- ☐ **Public email address** Confirm or replace.

Your footer currently shows **admin@pharmatiya.net**. Confirm that is the right public address, or give us another.

Appears in footer · Contact · every “email us” link
-
- ☐ **Calendar link for direct booking** A URL, or “skip it”.

If you want visitors to book a consultation themselves, we need a scheduling link. Roughly \$10–15 a month for a tool if you do not already have one.

Appears in Contact → book directly

IF NOT SUPPLIED

The panel becomes a “request a time” field on the form instead. Nothing breaks.
-
- ☐ **Role title** A job title.

Neither document you sent states a role at Pharmatiya, so the About page currently reads **Principal** with a visible “title to confirm” marker rather than us inventing one.

Appears in About → who we are
-

- ☐
- The year Pharmatiya was founded**
- A year.

Every other era on the About timeline is dated from your published record. The founding entry is the only one still marked “date to provide”.

Appears in About → how we got here

- ☐
- The patent number discrepancy**
- Confirm which, or both.

Your résumé gives two different numbers. The certifications section and the publications PDF both say **US 8,744,872**; the career highlights say **10489717**. We used the one two sources agree on.

Appears in About → credits · Evidence → published record

IF THESE ARE TWO SEPARATE PATENTS

Send confirmation and the proof figures gain “2 US patents”.

02 Copy for you to verify

We have written all of this. We need you to confirm it is accurate — particularly anything describing method or capability, where we have inferred from your documents rather than been told.

- ☐
- The three service descriptions**
- BEFORE LAUNCH**
- Read and mark up.

For each of Evidence generation, Real-world data analytics, and Access & value strategy: the problem statement, our approach, the methodology list, and the four-stage “how it runs” sequence.

Appears in Services · Home → what we do

NOTE

The “how it runs” stages are newly drafted and describe how you work. They are the item most likely to need correcting.

- ☐
- Full deliverables list per service**
- A list per service.

Each service currently lists three or four deliverables, drafted from your documents and flagged “full list to be confirmed”. What does a client actually receive at the end?

Appears in Services → deliverables

- ☐
- Engagement model or pricing guidance**
- A short description, or “omit”.

How projects typically start, run and conclude — and price ranges if you are willing to publish them.

Appears in Services → engagement model

IF NOT SUPPLIED

The section is removed at launch. It will not ship with placeholder pricing.

- ☐ **The Outcomes Research division — which organisation** BLOCKING Cleared name, or confirm we keep it unnamed.

The strongest single credential on the site is that you built an organic Outcomes Research division on the payer side. We cannot name the organisation without clearance, so the homepage currently reads “name pending client clearance” in the middle of your best claim.

Appears in [Home](#) → [pull-quote](#) · [About](#)
-
- ☐ **Therapeutic areas beyond the published record** A list.

The Evidence page lists twelve areas, each backed by a citation count from your bibliography. If your experience is broader — and it almost certainly is — tell us which areas to add.

Appears in [Evidence](#) → [therapeutic expertise](#) · [proof figure](#)
“12 therapeutic areas”
-
- ☐ **Quarterly Insights Digest — what it actually is** Two or three sentences.

Frequency, subject matter, and who writes it. Your current site mentions the Digest twice and captures nothing; this will be its first working signup.

Appears in [Contact](#) · [footer signup](#)

03 NextGen AI

This page is the least complete on the site, because almost everything on it is a factual claim about your product that only you can make. It is also your biggest differentiator, so it is worth the time.

WHY THIS PAGE IS DIFFERENT

Buyers in a regulated field read AI claims adversarially. Every statement here needs to be one you would defend in a procurement review — which is why the page is built around trust rather than features, and why we will not draft these claims for you.

- ☐ **What the product actually is, in one sentence** BEFORE LAUNCH One sentence.

The page currently opens with a headline we wrote and a visible “precise product definition to be confirmed” marker underneath it.

Appears in [NextGen AI](#) → [opening](#)
-
- ☐ **What the model does, and what a researcher does** Two lists.

We have drafted both columns — the model drafts structure, summarises literature, proposes cohort definitions; the researcher approves the question, validates methods, signs off output. Confirm or correct, and add anything missing.

Appears in [NextGen AI](#) → [where AI is used](#)
-

- ☐

Exactly how patient data is handled

BLOCKING

Reviewed wording.

The page states that no PHI is uploaded. We need your precise wording, reviewed internally — this is the single claim most likely to be challenged.

Appears in NextGen AI → trust
-
- ☐

The underlying model and version

Model name + version.

Your brief asks for disclosure rather than a disclaimer, so the page has a slot for naming the model. We need the name and version, and a commitment on what happens when it changes.

Appears in NextGen AI → trust → model disclosed
-
- ☐

What the tool does *not* do

Three or four points.

Stating limits plainly is a trust asset with this audience, not a weakness. The section exists and is empty.

Appears in NextGen AI → limitations
-
- ☐

Product screenshots

1–3 images.

The page holds a marked empty panel where the interface should be. We will not mock up a fake interface.

Appears in NextGen AI → opening panel

FORMAT

PNG, at least 1600px wide, taken at a normal browser size. Blur or replace any real patient or client data before sending.
-
- ☐

The study list

BEFORE LAUNCH

CSV or sheet access.
Without it: the search finds nothing.

We rebuilt the keyword search from your current homepage — it works now, where the live one does not. It currently indexes **zero studies**, because we do not have the data.

Appears in NextGen AI → search prior work

FORMAT

Either export the studylist sheet as CSV and send it, or give us read access to the Google Sheet. **Please also rotate the API key** currently embedded in your live homepage — anyone viewing the page source can read it and query the sheet.

04 Assets & media

The site is built to degrade honestly — where an asset is missing, the space holds with a marked panel rather than filling with stock. That is deliberate, but it is not

how you want to launch.

- ☐ **Team photographs** **BEFORE LAUNCH** One per person.

Real headshots of the people who do the work. The referral visitor — someone who arrived because a colleague recommended you — answers “is this a real firm?” visually in about a second.

Appears in About → who we are

FORMAT

JPG or PNG, at least 1000px on the short edge, plain or working background. Phone photos in good light are fine. **No stock portraits will be substituted** — without these the section ships as names and credentials in type only.

- ☐ **Office or working photography** 1–2 images.

One or two images of the environment — a desk, a screen with analysis on it, the office. Not posed.

Appears in About → opening panel

FORMAT

JPG, at least 2000px wide, landscape.

- ☐ **The rest of the team** Per person.

Name, post-nominals, role and two or three sentences each. The page is built to take any number — adding someone is one entry in one file.

Appears in About → who we are

- ☐ **Your logo as a vector file** **BEFORE LAUNCH** One file.
Currently: text wordmark stands in.

The logo on your current site is a low-resolution JPEG. It looks soft on modern screens, which costs you credibility at exactly the moment a buyer is forming an impression.

Appears in header · footer · browser tab icon

FORMAT

SVG, AI or EPS. Whoever designed it will have the original.

- ☐ **Typeface decision** Approve an option.

The site is set in a placeholder pairing. A licensed display face is what stops it looking like every other template — we will propose two or three options.

Appears in every page

COST

Roughly \$200–500 one-time, paid by Pharmatiya. Swapping it once licensed is a one-line change.

☐ Brand colours

Comes with the logo.

The palette was built to sit with your existing identity, but we matched it by eye from a compressed JPEG. The vector logo will let us confirm the exact values.

Appears in every page

05 Evidence — the two big ones

Evidence is the page your primary buyer came for. Your published record already carries it — 47 entries, verifiable by DOI. These two items would make it much stronger.

☐ Two or three anonymised case studies BEFORE LAUNCH

2–3 studies.

For each: the challenge the client could not answer, the dataset used, the method, how the work was sequenced, and what it enabled. No client names needed.

Appears in Evidence → case studies

CURRENTLY

The section renders an honest statement that client work is confidential, plus a route to ask for material under NDA. It is **not** filled with invented cases and never will be.

IF WRITING THESE IS THE BLOCKER

We will run a 90-minute interview and draft them from your recollection for your approval. That is usually faster than a blank page.

☐ One sample deliverable

One PDF.

A redacted synopsis or analysis report, so a prospective client can judge the output before commissioning any. This is a strong, low-commitment conversion route.

Appears in Evidence → sample deliverable

IF NOT SUPPLIED

The section is removed at launch rather than shipped non-functional.

– If you only do five things

In order of what unblocks the most.

ITEM	UNBLOCKS	EFFORT
1. Dataset name clearance	Three pages stop hiding your strongest coverage claims	15 minutes
2. Hosting and form destination	The site can receive an enquiry at all	One decision
3. Product name and NextGen AI detail	Your biggest differentiator becomes a finished page	An hour
4. Team photographs and vector logo	About stops reading as unfinished; the logo stops looking soft	Half a day
5. Case studies	Evidence gains the proof your buyer actually came for	90-minute call with us

Everything here is designed to fail safely. If an item never arrives, the site still launches — that section either carries a visible marker or is removed, and nothing is invented to fill the gap. What you lose is persuasive weight, not a working website.
